Message from the Guest Editors

Metal-based drugs are used for a wide range of human diseases, beyond their well-known applications in cancer (cisplatin) or rheumatoid arthritis (auranofin). For instance, a number of metal complexes have been developed for the treatment/cure of a variety of disorders, such as ulcers, diabetes, inflammatory and cardiovascular diseases, and so on.

This Special Issue will cover a selection of recent research and review articles to collect and disseminate some of the most significant and recent contributions in the field of metals used in medicine.

Message from the Editor-in-Chief

As the premier open access journal dedicated to experimental organic chemistry, and now in its 25th year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts and novel materials. Pushing the boundaries of the discipline, we invite papers on multidisciplinary topics bridging biochemistry, biophysics and materials science, as well as timely reviews and topical issues on cutting edge fields in all these areas.
