Deadline for manuscript  
submissions:

**closed (31 March 2023)**

### Message from the Guest Editor

Wettability is one of the most basic properties of solid surfaces, mainly depending on surface chemical composition and structure. Particularly, materials showing superwettability are most captivating for their significance in bionics, fundamental research and practical applications. Inspired by superwettability in nature, a large number of superhydrophobic and superoleophobic materials have been developed by the combination of designing special surface microstructures and appropriate chemical composition in the past two decades. Artificial superhydrophobic or superoleophobic materials have attracted much attention because of their broad applications in liquid repellence, self-cleaning coatings, anti-fog/ice/snow, anti-corrosion for metals, underwater drag reduction, cell engineering, oil/water separation, liquid/droplet manipulation, microfluidics, lab on a chip, buoyancy enhancement, liquid patterning, etc. Studies related to extreme surface wettability is still a current research focus. This issue presents recent developments of superhydrophobic/superoleophobic surfaces, mainly focusing on their design principles, fabrication methods, colorful properties and novel applications.

an Open Access Journal by MDPI

Münster, Germany

## Message from the Editor-in-Chief

As the premier open access journal dedicated to experimental organic chemistry, and now in its 25th year of publication, the papers published in *Molecules* span from classical synthetic methodology to natural product isolation and characterization, as well as physicochemical studies and the applications of these molecules as pharmaceuticals, catalysts and novel materials. Pushing the boundaries of the discipline, we invite papers on multidisciplinary topics bridging biochemistry, biophysics and materials science, as well as timely reviews and topical issues on cutting edge fields in all these areas.

## Author Benefits

**Open Access:** free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility:** indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [Reaxys](#), [CaPlus / SciFinder](#), [MarinLit](#), [AGRIS](#), and [other databases](#).

**Journal Rank:** JCR - Q2 (Chemistry, Multidisciplinary) / CiteScore - Q1 (Chemistry (miscellaneous))
