Nanomaterials for Sustainable Water Remediation

Guest Editors:

Dr. Chongqing Wang

School of Chemical Engineering,
Zhengzhou University,
Zhengzhou 450001, China

Dr. Grzegorz Boczkaj

Department of Process
Engineering and Chemical
Technology, Faculty of
Chemistry, Gdańsk University of
Technology, 80-233 Gdansk,
Poland

Dr. Jianchao Wang

School of Chemical and
Environmental Engineering,
China University of Mining and
Technology, Beijing 100083, China

Deadline for manuscript
submissions:

31 December 2024

Message from the Guest Editors

This Special Issue will emphasize the integration of nanomaterials into advanced water treatment systems, such as membrane separation, adsorption, photocatalysis, disinfection, and advanced oxidation processes. By highlighting both fundamental research and practical applications, this collection will foster collaboration among researchers to accelerate the translation of nanotechnology-driven solutions from the laboratory to real-world water treatment scenarios.

In this Special Issue, original research articles and reviews are welcome. Research areas may include, but are not limited to, the following:

- Nanomaterial synthesis and characterization;
- Nanomaterials for contaminant removal;
- Environmental implications and safety considerations;
- Nano-enabled water treatment technologies;
- Innovative applications and emerging trends.

We look forward to receiving your contributions.

Message from the Editor-in-Chief

Nanoscience and nanotechnology are exciting fields of research and development, with wide applications to electronic, optical, and magnetic devices, biology, medicine, energy, and defense. At the heart of these fields are the synthesis, characterization, modeling, and applications of new materials with lower nanometer-scale dimensions, which we call “nanomaterials”. These materials can exhibit unusual mesoscopic properties and include nanoparticles, coatings and thin films, metal-organic frameworks, membranes, nano-alloys, quantum dots, self-assemblies, 2D materials such as graphene, and nanotubes. Our journal, *Nanomaterials*, has the goal of publishing the highest quality papers on all aspects of nanomaterial science to an interdisciplinary scientific audience. All of our articles are published with rigorous refereeing and open access.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Chemistry, Multidisciplinary*) / CiteScore - Q1 (General Chemical Engineering)
