## Controlled Growth and Properties of Semiconductor Nanomaterials

Guest Editor:

### **Dr. Xin Rong**

State Key Laboratory of Artificial  
Microstructure and Mesoscopic  
Physics, School of Physics,  
Peking University, Beijing 100871,  
China

Deadline for manuscript  
submissions:

**30 September 2024**

### **Message from the Guest Editor**

This Special Issue focuses on the controlled growth of nanomaterials, the characterization of nanostructures, and practical applications. The growth starts from substrates, followed by buffers, epi-layers, and nanostructures. The growth process is in situ characterized if possible. The growth diagram can be shown, and the lattice misfit, defect, strain, polarity control, and crystal phase transition can also be discussed. The properties which are affected by different nanostructures or nanomaterials should be investigated.

Original research articles and reviews are welcome in this Special Issue. Research areas may include (but are not limited to) the following:

- Fabrications and characterizations of nanostructures;
- Novel quantum structures and their applications;
- Devices based on semiconductor nanomaterials.

We look forward to receiving your contributions.

## Message from the Editor-in-Chief

Nanoscience and nanotechnology are exciting fields of research and development, with wide applications to electronic, optical, and magnetic devices, biology, medicine, energy, and defense. At the heart of these fields are the synthesis, characterization, modeling, and applications of new materials with lower nanometer-scale dimensions, which we call “nanomaterials”. These materials can exhibit unusual mesoscopic properties and include nanoparticles, coatings and thin films, metal-organic frameworks, membranes, nano-alloys, quantum dots, self-assemblies, 2D materials such as graphene, and nanotubes. Our journal, *Nanomaterials*, has the goal of publishing the highest quality papers on all aspects of nanomaterial science to an interdisciplinary scientific audience. All of our articles are published with rigorous refereeing and open access.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPlus / SciFinder, Inspec, and other databases.

**Journal Rank:** JCR - Q2 (*Chemistry, Multidisciplinary*) / CiteScore - Q1 (General Chemical Engineering)
