## Control of Light–Matter Interaction at the Nanoscale

Guest Editors:

**Dr. Ioannis Thanopoulos**

Department of Materials Science,  
University of Patras, Patras,  
Greece

**Dr. Emmanuel Paspalakis**

Department of Materials Science,  
School of Natural Sciences,  
University of Patras, 26504 Rio,  
Patras, Greece

**Dr. Dionisis Stefanatos**

Department of Materials Science,  
School of Natural Sciences,  
University of Patras, 26504 Rio,  
Greece

Deadline for manuscript  
submissions:

**closed (31 December 2023)**

### Message from the Guest Editors

Dear Colleagues,

The interaction of light and matter has been a central element in revolutionizing the science and technology of modern society in an unprecedented way. Thus, the field of the control of interactions between light and matter is of vital importance since it covers important scientific aspects concerning physics, chemistry, and engineering.

The Special Issue on the control of light–matter interaction at the nanoscale aims to highlight recent computational and theoretical advancements related to light–matter interaction and its control at the nanoscale in relevant research areas within physics, chemistry, and materials science; however, contributions of novel experimental results are also highly welcome.

Manuscripts can be submitted in the following formats: full research papers, communications, and reviews.

of California Davis, One Shields  
Avenue, Davis, CA 95616-5270,  
USA

## Message from the Editor-in-Chief

Nanoscience and nanotechnology are exciting fields of research and development, with wide applications to electronic, optical, and magnetic devices, biology, medicine, energy, and defense. At the heart of these fields are the synthesis, characterization, modeling, and applications of new materials with lower nanometer-scale dimensions, which we call “nanomaterials”. These materials can exhibit unusual mesoscopic properties and include nanoparticles, coatings and thin films, metal-organic frameworks, membranes, nano-alloys, quantum dots, self-assemblies, 2D materials such as graphene, and nanotubes. Our journal, *Nanomaterials*, has the goal of publishing the highest quality papers on all aspects of nanomaterial science to an interdisciplinary scientific audience. All of our articles are published with rigorous refereeing and open access.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPlus / SciFinder, Inspec, and other databases.

**Journal Rank:** JCR - Q2 (*Chemistry, Multidisciplinary*) / CiteScore - Q1 (General Chemical Engineering)
