Deadline for manuscript
submissions:
closed (31 March 2023)

Message from the Guest Editor

Metal nanoparticles (NPs) are used in a wide range of applications. Because of their small size, NPs can easily enter the human body and may reach the most sensitive organs (spleen, liver, lungs, heart, gastrointestinal tract, brain, endocrine system, or female and male reproductive organs). In order to clear these NPs from the body, the components of the immune system are activated. Interactions between NPs and biomolecules, such as proteins or nucleic acids, interfere with their biological functions and can lead to cell damage. Thus, the adverse effects of nanoparticles need to be studied extensively to gain a deep understanding of the toxicological profiles of these compounds.

The aim of this Special Issue is to highlight the latest research on the toxicology of metal nanoparticles. We invite the submission of original research articles and reviews in which the effects of nanoparticles are investigated and their in vivo toxicity in experimental animals is evaluated. Potential topics include, but are not limited to, the immunotoxicity, genotoxicity, reproductive toxicity and other organ toxicities of metal nanomaterials.

Message from the Editor-in-Chief

Nanoscience and nanotechnology are exciting fields of research and development, with wide applications to electronic, optical, and magnetic devices, biology, medicine, energy, and defense. At the heart of these fields are the synthesis, characterization, modeling, and applications of new materials with lower nanometer-scale dimensions, which we call “nanomaterials”. These materials can exhibit unusual mesoscopic properties and include nanoparticles, coatings and thin films, metal-organic frameworks, membranes, nano-alloys, quantum dots, self-assemblies, 2D materials such as graphene, and nanotubes. Our journal, *Nanomaterials*, has the goal of publishing the highest quality papers on all aspects of nanomaterial science to an interdisciplinary scientific audience. All of our articles are published with rigorous refereeing and open access.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Chemistry, Multidisciplinary*) / CiteScore - Q1 (General Chemical Engineering)
