

Perovskite-Based Nanostructures and Nanodevices

Guest Editors:

Dr. Xingang Ren

Dr. Di Zhang

Dr. Fengxian Xie

Deadline for manuscript
submissions:

closed (30 November 2022)

Message from the Guest Editors

The perovskite based nanostructures (e.g., waveguide, metamaterial, metasurface, etc.) and nanodevices (photovoltaic, light emitting diode, photodetector, laser, memristor, etc.) have become the topics and have been intensively studied. This Special Issue of Nanomaterials welcomes contributions of original research articles, reviews, perspectives and comments concerning the challenges facing in the research area of perovskite based nanostructures and nanodevices. The topics include the synthesis of new perovskite with versatile (inorganic) material composition and engineering of (0D, 1D, 2D and 3D) perovskite nanostructures such as the waveguide, metamaterial, metasurface. It also includes the research work that contributes to develop high-efficiency perovskite based nanodevices such as photovoltaic, light emitting diode, photodetector, laser, memristor etc., as well as the theoretical and experimental understanding to unveil the working mechanisms. Beyond the above topics, other original research closely related to perovskite based nanostructures and nanodevices are also highly welcome.

Message from the Editor-in-Chief

Nanoscience and nanotechnology are exciting fields of research and development, with wide applications to electronic, optical, and magnetic devices, biology, medicine, energy, and defense. At the heart of these fields are the synthesis, characterization, modeling, and applications of new materials with lower nanometer-scale dimensions, which we call “nanomaterials”. These materials can exhibit unusual mesoscopic properties and include nanoparticles, coatings and thin films, metal-organic frameworks, membranes, nano-alloys, quantum dots, self-assemblies, 2D materials such as graphene, and nanotubes. Our journal, *Nanomaterials*, has the goal of publishing the highest quality papers on all aspects of nanomaterial science to an interdisciplinary scientific audience. All of our articles are published with rigorous refereeing and open access.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Chemistry, Multidisciplinary*) / CiteScore - Q1 (General Chemical Engineering)
