Advances in Eddy Current Non-destructive Testing

Guest Editor:

Dr. Qiuji Yi

Department of Mechanical
Engineering, University of Bristol,
Bristol BS8 1TH, UK

Deadline for manuscript
submissions:

closed (30 June 2024)

Message from the Guest Editor

The Special Issue aims to provide an in-depth overview of the latest developments in the field. The articles in this Special Issue attend to a wide range of topics, including the following:

- **Advanced sensor/sensor array design:** This includes the application novel materials to create more sensitive and selective sensors. It also includes the development of new sensor geometries.
- **Eddy current data processing and automatic evaluation:** This includes the application of machine learning/AI to analyze eddy current data.
- **Industrial applications:** This includes the application of the eddy current testing of complex materials as well as the inspection of industrial structures.
- **Multimodal sensing:** Multimodal sensing, which combines eddy current with other sensing modalities.
- **Miniaturization and portability:** This includes the development of handheld or mobile systems that can be employed in the field.

The Special Issue provides a comprehensive overview of the latest developments in ECT technology. We are hoping to identify the ability of eddy currents to improve efficiency, minimize waste and support manufacturing and energy systems.
