Message from the Guest Editor

Dear Colleagues,

Alpha-synuclein (a-syn) plays a key role in the pathology of Parkinson's disease (PD), dementia with Lewy bodies (DLB), Multiple system atrophy (MSA), and other diseases. However, we are still short of biomarkers for alpha-synuclein pathology and its progression in living people. There are yet no cures for these diseases and biomarkers that can direct future therapies are urgently needed.

This special issue aims to gather studies of potential biomarkers of a-syn pathology in PD, DLB, MSA, and related diseases with emphasis on diagnostic and prognostic value, and the use of non-invasive patient samples.
