Message from the Guest Editors

Dear Colleagues,

Nutrition is a fundamental issue in food allergy. It is becoming an increasingly serious problem around the world, affecting almost 10% of children. When this pathology develops in children, the nutritional contribution they receive is the least adequate, since they are advised to avoid the intake of foods that induce food allergic reaction.

This Special Issue will provide information on the tools that are available for the diagnosis and treatment of food allergies. This Special Issue will include manuscripts that focus on nutrition, nutritional treatment (use of nutraceuticals), and new therapeutic approaches in food allergies. The presented materials are the result of the international scientific cooperation of experts that specialize in these issues. The content may be useful for clinical results to help in the diagnosis and treatment of food allergies.

an Open Access Journal by MDPI
