Message from the Guest Editors

Food labels are a tool to promote public health by providing information which allows consumers to make informed dietary choices. It welcomes contributions from any qualified individual or group within the food sector that is based upon original research, reviews of the literature and evidence-based commentaries focusing on:

Measurement of the absolute impact (or not) of established FoP systems on consumer behaviour and choice.

Research on the impact (or not) of FoP labels on manufacturer behaviours such as food product formulation, design, and marketing.

The consumer learning and choice mechanisms that are used to evaluate food nutritional labels and the products that carry them.

The relationship between FoP label system and specific consumer cultures, attitudes, or beliefs.

The Editors welcome contributions from academic researchers, and also informed individuals/groups who are participating in the food sector in other roles.
