### Message from the Guest Editors

Human serum lipoproteins are causally related to the development and regression of cardiovascular atherosclerosis, and highly responsive to changes in diet and food intake. This Special Issue in *Nutrients* on ‘Serum lipids, lipoproteins and human health’ welcomes original research and reviews of the literature in the following areas: dietary interventions that inform the inter-relationships between diet, body composition, lipids and lipoproteins and cardiovascular risk; genomics, metabolomics, and/or phenomics, and studies on the impact of dietary patterns and/or specific food groups.
