Deadline for manuscript submissions:

**closed (20 June 2023)**

### Message from the Guest Editors

Inflammatory bowel diseases (IBDs), including Crohn's disease (CD) and ulcerative colitis (UC), are characterized by chronic inflammation of the gastrointestinal (GI) tract. The nutritional management of IBD patients includes several dietetic plans that lead patients to exclude various food categories. In adults, these strategies may have low adherence and a negative influence on quality of life. While there is no one-size-fits-all diet in most cases, the dietetic intervention is personalized. The objective of nutritional intervention is to prevent nutritional deficiencies, improve body composition and ameliorate the quality of life of IBD patients. Furthermore, both nutrition and nutritional intervention could have a potential therapeutic role in preventing active disease flare-ups or decreasing the incidence of postoperative complications.

This Special Issue aims to update the knowledge on diet and nutrition in adults with IBDs, focusing on dietary strategies according to the different clinical aspects of the disease. We welcome different types of manuscript submissions, including original research articles and up-to-date reviews (systematic reviews and meta-analyses).

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, AGRIS, and other databases.

**Journal Rank:** JCR - Q1 (Nutrition and Dietetics) / CiteScore - Q1 (Food Science)
