Message from the Guest Editor

Dear Colleagues,

Cholesterol is indispensable for a proper functionality of human cells. A high blood cholesterol concentration is associated with development of cardiovascular disease. Dietary cholesterol intake and endogenous synthesis are the input fluxes of the whole body cholesterol pool. In the liver, cholesterol homeostasis is controlled via regulation of a large set of interactive fluxes: lipoprotein metabolism, cholesterol synthesis, bile acid formation and biliary cholesterol secretion. The small intestine determines the degree of absorption of cholesterol and the secretion of cholesterol-containing chylomicron particles. Many of these processes as well as the role of the food matrix in dietary cholesterol handling are only partially understood. Dietary means of lowering blood cholesterol involves extreme low cholesterol intake and increased intake of fiber and phytosterols.

We gratefully invite authors to submit original and review papers that contribute to a better understanding of cholesterol homeostasis.

Sciences, University of
Connecticut, Storrs, CT 06269,
USA

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, AGRIS, and other databases.

Journal Rank: JCR - Q1 (Nutrition and Dietetics) / CiteScore - Q1 (Food Science)

Message from the Editorial Board

Nutrients is an on-line open access journal that was first published in 2009. *Nutrients* adheres to rigorous peer-review and editorial processes and publishes only high quality manuscripts that address important issues related to the impacts of nutrients on human health. The Impact Factor of *Nutrients* has risen rapidly since its establishment and it is now ranked in the first quartile of journals publishing in the field of nutrition and dietetics research.
