### Message from the Guest Editor

Dear Colleagues,

Consumer interest in plant-based diets has markedly increased over the past few years. Segments of the population desire food products that improve human and planetary health and protect against major chronic diseases. As non-dairy and non-meat alternatives become mainstream, questions have emerged concerning how sustainable these plant-based diets are: What impact do they have on food security? Do these plant-based meat and dairy alternatives help lessen environmental degradation? Are these products nutritious and healthy? Do plant-based diets put populations at risk for any vitamin or mineral deficiencies? Do plant-based diets help diminish malnutrition and overnutrition (leading to obesity)? We invite research papers that discuss such issues and provide some answers to these important questions.
