Message from the Guest Editor

Dear Colleagues,

Disease-related malnutrition is one reason for poor outcomes in older adults. Disease-related malnutrition is caused by severe diseases with inflammation, such as cancer, heart failure, hepatic failure, kidney disease, collagen diseases, and so forth. Disease-related malnutrition is also caused by conditions without inflammation, such as stroke, neurogenerative diseases, and so forth. Thus, older adults with comorbidities face nutritional issues.

The goal of this Special Issue is to focus on the importance of management for disease-related malnutrition of older adults. The Issue welcomes dedicated articles such as systematic reviews, narrative reviews, intervention studies, and observation studies.
