The Role of Dietary Bioactive Compounds on Liver Cancer and Non-alcoholic Fatty Liver Disease

Guest Editor:

Message from the Guest Editor

Dr. Ben Chi-bun Ko

State Key Laboratory of Chemical Biology and Drug Discovery, Department of Applied Biology and Chemical Technology, The Hong Kong Polytechnic University, Hong Kong

Dietary bioactive compounds exert beneficial effects on several metabolic disorders associated with the liver. Natural products and related phytochemicals act through multiple pathways, such as modulating gut microbiota, improving redox stress, and anti-inflammation.

Deadline for manuscript submissions:

closed (25 September 2023)

Globally, liver cancer is a kind of frequent fatal malignancy. Hepatocellular carcinoma (HCC) is the most common type of primary liver cancer. Several pharmacological interventions, chemotherapy and immunotherapy, have been approved for use in its treatment. Nevertheless, they have been found to display a variety of negative side effects. On the other hand, prevalence of non-alcoholic fatty liver disease (NAFLD) has risen rapidly and is now a frequent cause of chronic liver disease and HCC. Dietary bioactive compounds that alleviate NAFLD could reduce the risk of HCC development.

This Special Issue provides a platform for researchers to discuss the role of dietary bioactive compounds on liver cancer and NAFLD with the aim of helping to promote the development of this field. In the present Special Issue, we welcome original articles, narrative and systematic reviews.
