Message from the Guest Editor

Dear Colleagues,

Depending on the definition used, malnutrition prevalence among hospitalized adults has been estimated to be as high as 50%. Not surprisingly, malnutrition in this population is associated with unfavorable outcomes, such as secondary morbidity, death (both in-hospital and following discharge) as well as prolonged and repeated hospitalizations. The proposed Special Issue, Malnutrition in Hospitalized Patients, will provide a platform for studies and reviews on the following topics, all of which refer to hospitalized populations:

1. Defining malnutrition;
2. Screening for malnutrition;
3. Factors predicting malnutrition risk;
4. Measuring nutrition intake;
5. Improving nutrition intake;
6. Oral nutrition supplements;
7. Parenteral nutrition;
8. Clinical outcomes of malnutrition.

Prof. Dr. Mona Boaz
