Deadline for manuscript  
submissions:

**closed (30 November 2022)**

### Message from the Guest Editors

Dear Colleagues,

Maternal diet and infant nutrition are crucial to the short- and long-term health of the offspring, including physical, motor, cognitive, and socio-emotional development. Maternal diets have compelling impacts on the development of both fetus and infants who are being fed with breast milk. Infant nutrition, depending on breast milk and complementary foods, also plays a role significant enough to warrant the optimal development. Our current understanding of maternal diet, infant nutrition, and short- and long-term health and development is far from sufficient and remains a challenge for scientists.

This Special Issue on “Maternal Diet, Infant Nutrition, and Short- and Long-term Health and Development” is now inviting submissions of manuscripts, either original research or reviews with an emphasis on maternal diet, infant nutrition, and offspring health and development. Biological mechanisms underlying the relationships will be considered as well. Studies on both humans and animals are welcome.

Prof. Dr. Jianmeng Liu
