Message from the Guest Editor

Dear Colleagues,

You are invited to submit proposals for manuscripts that fit the topics of “Nutriotion in pregnancy and child”. Nutrition is fundamental to life, and its critical role in fetal development has been clearly demonstrated in decades of animal studies establishing the importance of individual nutrients. Although majority of the work in the developing world has shown the relationship of nutrient insufficiencies to maternal and infant health in humans, but even in the well-nourished populations, deficiencies of some individual nutrients have been reported and are the focus of educational and public campaign.

The focus of this special issue is on the importance of nutrition (nutrient intake and nutrient status) in pregnancy. Papers will be included that report maternal nutrient and its effect on pregnancy, maternal, birth and neonatal outcomes and child developmental outcomes. This new information will provide health care professionals with a widespread, clear and update evidence on recommendation on essential vitamins, minerals, and food categories to be taken during pregnancy to improve mothers and babies’ outcomes.
