Message from the Guest Editor

Currently, the high-fat, low-carbohydrate ketogenic diet is attracting a great deal of attention in the field of cancer treatment. I would like to discuss the molecular mechanisms of the ketogenic diet for cancer and the comparison with epilepsy therapy in children. I have shown the possibility of the new ketogenic diet regimen for cancer. I also would like to discuss the possibility of early clinical trial/case series and the adequate clinical trial protocol of the ketogenic diet for cancer. For that purpose, I also look forwards to reports on functional foods inducing ketones more efficiently. As Guest Editor of this timely Special Issue, I would like to invite you to contribute your original research articles or reviews on the ketogenic diet for cancer.
