### **Message from the Guest Editor**

Dear Colleagues,

Nutrients is planning a Special Issue focusing on beverages and ingestive behavior. This Special Issue will focus on research related to all aspects of beverage consumption and post-ingestive consequences. There continues to be much controversy surrounding the influence of beverage choice on health outcomes. Research investigating the impact of beverage choice has on human health and post-ingestive consequences continue to grow. We know from the growing body of literature that beverage choice has a substantial impact on metabolism, food reinforcement and eating behaviors.

Potential topics may include, but are not limited to:

- Short-term and long-term intervention trials and epidemiological studies investigating the role of beverages on food intake, eating behaviors and post-ingestive consequences.
- Correlations between beverage consumption, diet quality and nutritional status.
- Beverage consumption patterns and health outcomes
- The timing of beverage consumption on post-ingestive consequences

Dr. Shanon L. Casperson
