Message from the Guest Editor

Community nutrition incorporates the study of nutrition and the promotion of good health through food and nutrient intake in populations.

In this Special Issue, we would like to bring readers closer to novel research covering different aspects of community nutrition, public health nutrition, and food/eating behavior. Topics of the submitted articles may, though not necessarily, include studies regarding the eating habits of various populations, the relation of food choices and risk of diseases (such as obesity and diabetes), dietary interventions in different communities (i.e., children, adolescents, pregnant women, healthy adults, older populations, etc.), interventions aiming to improve nutritional behaviors, studies related to food labelling, marketing, taxation, and other studies related to public health nutrition, associations between nutrients/foods/food patterns and chronic disease including obesity, diabetes, cardiovascular disease, etc. Original research articles and reviews (systematic reviews and meta-analyses) are welcome.

an Open Access Journal by MDPI
