submissions:

**closed (25 April 2022)**

### Message from the Guest Editor

Dear Colleagues,

Both obesity and diabetes are global health threats, however the mortality of these patients are attributed their complications or specifically called metabolic syndrome and diabetic cardiovascular complications. Therefore the reviews or original studies on their pathogenic mechanisms, and interventionally application of nutrients, natural products that sufficiently stimulates body's defense system such as anti-oxidative stress and inflammation as well as improvement of insulin signaling (resistance) are welcome. In addition, in order to accelerate the clinical translation, currently FDA-approved or clinically-commonly used medicines that are repurposed for applying to stimulating Nrf2-mediated antioxidative and anti-inflammation, and Akt-mediated insulin signaling pathway are more welcome.
