submissions:

closed (30 June 2020)

Message from the Guest Editors

Dear Colleagues,

Dietary strategies have been shown to successfully treat many chronic conditions; however, to date, less research has been focused on the potential for diet to modulate pain conditions. Emerging data are promising in this respect. As such, this Special Issue seeks submissions with a focus on nutrient effects on pain. This can include research on any chronic pain condition and can deal with areas such as gastrointestinal function, the gut–brain axis, immune function, inflammation, oxidative stress, healing effects of diet, as well as research on how diet affects pain neurotransmission. *Nutrients*, therefore, invites submission of manuscripts of original research or reviews which focus on diet or nutrient modulation of pain.
