Message from the Guest Editors

Dear Colleagues,

Since all living organisms require energy (ATP) in order to maintain homeostasis, adequate regulation of energy metabolism is crucial for maintaining health. In eukaryotic cells, mitochondria are key players in ATP production, by hosting the ATP generating process of oxidative phosphorylation. Both macro- and micronutrients potentially influence energy metabolism and mitochondrial functioning, either as substrates for (oxidative) catabolism or as essential constituents of enzymes or protein complexes involved in (mitochondrial) energy metabolism. Therefore, good metabolic health strongly depends on adequate supply of these nutrients, which, in turn, may depend on (patho) physiological and environmental conditions.

This Special Issue will include manuscripts that focus on the complex relationship between nutrients, (mitochondrial) energy metabolism and health, under various physiological conditions (e.g., ageing, exercise, hypoxia). Within this context, primary research papers as well as reviews in a variety of areas, including nutritional physiology and molecular physiology are welcomed.

Dr. Arie Nieuwenhuizen

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, AGRIS, and other databases.

Journal Rank: JCR - Q1 (Nutrition and Dietetics) / CiteScore - Q1 (Food Science)
