Message from the Guest Editors

Dear Colleagues,

Dietary intakes play an important role in nutrition, health, and well-being among children. The complexity of dietary intakes among children is influenced by economics, family structures, cultural issues, and the external environments. All of these issues and the growing complexity of the world's food environment influence the eating behaviors of children. This Special Issue welcomes the many topical areas related to food intake and nutritional status among infants, children, and adolescents. All study designs are welcome within the context of youth, dietary intake, or dietary exposures, as well as methodology developments that improve dietary data collection methods in this age group.
