submissions:  
**closed (1 August 2021)**

### Message from the Guest Editor

Food hypersensitivities include allergic (IgE-dependent and IgE-independent food allergies) and non-allergic (lactose, histamine, salicylate or synthetic additives intolerance, coeliac disease, non-coeliac gluten intolerance) disorders. Such disorders occur not only among infants and children but also among adults. Treatment involves elimination diets, which can lead to nutritional deficiencies and malnutrition as well as feeding disorders in children.

The aim of this Special Issue of *Nutrients* on "Food Sensitivity: Causes and Management" is to provide information on different forms of food hypersensitivity and different ways of conducting elimination diets. We are in papers covering topics from anaphylactic conditions requiring full elimination of even trace amounts of food to IgE-dependent allergies to milk or egg, in which some patients can be given these products in a baked form.

Dr. Grazyna Czaja-Bulsa
