closed (30 September 2018)

# **Message from the Guest Editors**

Dear Colleagues,

The worldwide pooled prevalence of functional abdominal pain disorders (FAPDs) in pediatrics is 13.5%. FAPDs account for up to 75% of all pediatric gastroenterology consultations. The Rome IV criteria classifies these as functional dyspepsia, irritable bowel syndrome, abdominal migraine and functional abdominal pain - not otherwise specified. The role of nutrients in functional abdominal pain disorders is an active area of research. This special issue will focus on the latest evidence on the treatment of functional abdominal pain disorders in children in realtion to:

- Obesity
- Cow's milk protein allergy
- Gluten
- Disaccharidases deficiency
- Fiber
- Low FODMAP diet
- Probiotics
- Herbs and Spices
- Eating behaviors

Prof. Miguel Saps Assist. Prof. Amanda C. Fifi Guest Editors
