Message from the Guest Editor

Dear Colleagues,

In the Special Issue, we would like to collect papers on the health-promoting effect of nutraceuticals, taking into account both healthy people and patients affected by different pathologies. The administration of nutraceuticals is diffused to treat diseases, to contrast aging and stress, and to serve as dietary supplements for athletes.

Several studies on compositions, formulations, and nutraceutical delivery have been conducted so far, with inconsistent outcomes. In recent years, the health claims of nutraceuticals were not approved by FDA and EFSA agencies. Further research is required to analyze more in depth the mechanism of action of molecules to be used as nutraceuticals.

We welcome different types of submissions, including original research articles and up-to-date reviews. The topics may include but not be limited to the study of molecules extracted from plants used to treat different types of pathologies as inflammatory diseases, bone diseases, cancer, cardiovascular disease, obesity and weight control, diabetes, immunometabolism, hyperlipidemic diseases, skin diseases, and quality of life.
