Message from the Guest Editors

Age-related eye diseases are a major global health issue, since more than 20% of the elderly (>80 years old) are diagnosed with AMD. The role of nutrition in ocular aging is attracting growing interest, with hypotheses focusing on the joint effect of antioxidants and lipids. Epidemiological studies have identified several foods and nutrients of interest as well as dietary patterns related to AMD, but many nutritional exposures remain unexplored.

Over the past 15 years, we have accumulated a lot of knowledge about the beneficial effects of a healthy diet for AMD prevention. The next step is to evaluate this knowledge and disseminate it to the general population, patients, and practitioners (doctors, pharmacists, nutritionists). The management of nutritional aspects in the prevention of AMD has been improved. You are invited to submit proposals for manuscripts that fit the objectives and the topics of this Special Issue
