### Message from the Guest Editor

In this context, new studies are needed with the potential to produce significant improvements in knowledge of the relationship about the nutritional status and functionality. This Special Issue on “**Nutrition, nutritional status and functionality**” invites authors to submit original research articles (randomized controlled trials, cohort studies, practice-based/real-world evidence/registry studies, etc.), systematic reviews, narrative or scoping reviews, and meta-analyses that enhance the body of knowledge in this field. Research conducted in populations that have received little attention thus far is of particular interest. Controversial works that may lead to a potential paradigm shift will receive highest priority for inclusion.
