Message from the Guest Editor

Dear Colleagues,

Celiac disease (CD) is an autoimmune-related disease causing inflammation in the small bowel triggered by the ingestion of gluten. The only effective and safe treatment for celiac disease (CD) and gluten-related disorders is a lifelong, strict exclusion of gluten—the so-called gluten-free diet (GFD). Both inadequate dietary intake and/or diminished uptake due to intestinal damage contribute to nutrient deficiencies, most of which can be restored with a GFD and/or supplementation. On the other hand, numerous studies have reported nutritional imbalances associated with the GFD. Therapeutic protocols should include nutritional education to teach subjects affected by untreated and treated CD and gluten related disorders about the importance of reading labels, choosing foods, and combining macro- and micronutrients. New insights into the nutritional aspects of CD and gluten-related disorders present an exciting scientific challenge for researchers.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, AGRIS, and other databases.

Journal Rank: JCR - Q1 (Nutrition and Dietetics) / CiteScore - Q1 (Food Science)

Message from the Editorial Board

Nutrients is an on-line open access journal that was first published in 2009. *Nutrients* adheres to rigorous peer-review and editorial processes and publishes only high quality manuscripts that address important issues related to the impacts of nutrients on human health. The Impact Factor of *Nutrients* has risen rapidly since its establishment and it is now ranked in the first quartile of journals publishing in the field of nutrition and dietetics research.
