Message from the Guest Editors

Dear Colleagues,

There has been growing interest and evidence concerning the effects of dietary supplements on cardiovascular and metabolic disorders. The purpose of this Special Issue is to gather high-quality research papers with a solid research setting and/or translational potential on this topic, in order to create an up-to-date, systematic overview that examines, in detail, the functional role of dietary supplements in cardiovascular and metabolic diseases. We are interested in both clinical and pre-clinical investigations testing novel hypotheses that can advance the field. Novel therapeutic hypotheses and medicinal chemistry endeavors toward novel drug development are also encouraged. In this Special Issue of *Nutrients*, we are making a call to action to motivate researchers to submit their invaluable studies on this intriguing topic. This Special Issue welcomes the submission of manuscripts which either include evidence-based original research or reviews of the scientific literature.
