The Effects of Diseases and Nutritional Disorders on Occupational Health

Message from the Guest Editors

Occupational health is crucial for workers' health and maintaining productivity, as well as impacting output per capita. This Special Issue, "Effects of Diseases and Nutritional Disorders on Occupational Health", aims to maintain and promote the highest degree of the physical, mental, and social health of workers in all occupations by controlling risks, promoting healthy eating, providing humanitarian aid, improving health systems, and preventing departures from health. We will collect documents that deepen our knowledge of specific and innovative aspects of disease as well as nutrition disorders related to occupational health. Strategies with which to change the incidence and prevalence of nutritional disorders in workers include a focus on changing physical and social environments, over and above individual-level strategies, using a multi-level or systems approach. We hope that the articles in this Special Issue can help inform the decisions of employers, planners, researchers, and other public health decision makers. In the present Special Issue, we welcome original articles as well as systematic reviews.
