

## Special Issue

# Maternal Nutritional Status and Infant Development

### Message from the Guest Editors

The prenatal and early postnatal periods have been revealed as critical stages of development where nutritional and other environmental factors may have a profound influence on health. Among other factors, maternal conditions during these critical stages of development can affect child growth and long-term health outcomes.

In this Special Issue “Maternal Nutritional Status and Infant Development”, we welcome papers focusing on the link between maternal nutrition and infant development. This includes original animal and human research, cohort studies, and systematic reviews/meta-analyses. Topics of interest include, but are not limited to, the impact of maternal micronutrient deficiencies, the role of dietary patterns, and the influence of breastfeeding practices.

Understanding how maternal nutrition shapes infant health is crucial for designing effective interventions that can promote optimal development and prevent disease across generations.

## About the Journal

### Message from the Editorial Board

*Nutrients* is an on-line open access journal that was first published in 2009. *Nutrients* adheres to rigorous peer-review and editorial processes and publishes only high quality manuscripts that address important issues related to the impacts of nutrients on human health. The Impact Factor of *Nutrients* has risen rapidly since its establishment and it is now ranked in the first quartile of journals publishing in the field of nutrition and dietetics research.
