20 August 2024

Message from the Guest Editor

The purpose of this special issue is to bring together the scientific studies carried out on pollution by marine floating microplastics (MPs) all over the world. The main topics will be:

- the source of pollution,
- the type of microplastics in the different geographical areas,
- the impacts on the water column and its inhabitants,
- to discuss the latest techniques used by scientists,
- to better understand the possible future consequences and the solutions to the problem.
