Message from the Guest Editor

Dear Colleagues,

The main aim of this Special Issue on Advances of Forensic Dentistry is to collect and publish manuscripts about the latest research, ideas, and advances in forensic dentistry and all subdisciplines. This includes humanitarian forensic odontology, dental anthropology, bioethics, and the role of dentists and dental hygienists in criminal investigations and prevention of human rights violations. This Special Issue, after an attentive peer review process before publication, will act as a promoter of innovative and research directions of forensic odontology around the planet.

Keywords

- human identification
- dental age estimation
- bitemark analysis
- artificial intelligence
- machine learning
- humanitarian forensics
- forensic dentistry
- forensic odontology
