Message from the Guest Editor

Pathogenic agents can cause various infectious diseases when they enter the body of humans and animals and can spread through water, air, soil, and physical contact. These infectious diseases are major public health problems. The epidemiology of Pathogenic Agents enables us to observe and analyze the frequency of infectious diseases from the perspectives of pathogens, transmission routes, susceptible hosts, etc. The knowledge is important to reveal the mechanism and control of pathogenic infectious diseases.

This Special Issue aims to provide the latest findings on the various aspects of pathogenic agents epidemiology. We invite experts worldwide to submit research articles or review articles related to this important topic.

Message from the Editor-in-Chief

The worldwide impact of infectious disease is incalculable. The consequences for human health in terms of morbidity and mortality are obvious and vast but, when infections of animals and plants are also taken into account, it is hard to imagine any other disease that has such a significant impact on our lives—on healthcare systems, on agriculture and on world economics. *Pathogens* is proud to continue to serve the international community by publishing high quality studies that further our understanding of infection and have meaningful consequences for disease intervention.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PubAg, CaPlus / SciFinder, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Microbiology*) / CiteScore - Q2 (*General Immunology and Microbiology*)
