**Prof. Dr. Rafael Franco-
Cendejas**

**Dr. Jossue Mizaël Ortiz-
Álvarez**

Deadline for manuscript
submissions:

15 June 2024

Message from the Guest Editors

Since the appearance of the first antimicrobial molecules, the battle against microorganisms has intensified. As the years have passed, antimicrobial resistance has been increasing at an accelerated pace; on the other hand, the generation of new antimicrobial molecules, either de novo, by derivatization or chemical synthesis has decreased or slowed down.

We invite you to submit a review article or original research related to these issues.

The topic selected may be, but are not are limited to, the following:

- Novel epidemiological reports of the listed microorganisms;
- Molecular epidemiological reports;
- New resistance mechanisms;
- Characterization of resistance mechanisms in clinical isolates;
- Reports of molecules with activity against these microorganisms;
- Generation of novel identification methods of resistance mechanisms;
- Sequencing of complete genomes of microorganisms with resistance mechanisms;
- Description of new, novel or existing resistance mechanisms in collections of clinical isolates;
- Behavior of multidrug-resistant microorganisms in geographic regions connoted by molecular epidemiological impact ST.

Message from the Editor-in-Chief

The worldwide impact of infectious disease is incalculable. The consequences for human health in terms of morbidity and mortality are obvious and vast but, when infections of animals and plants are also taken into account, it is hard to imagine any other disease that has such a significant impact on our lives—on healthcare systems, on agriculture and on world economics. *Pathogens* is proud to continue to serve the international community by publishing high quality studies that further our understanding of infection and have meaningful consequences for disease intervention.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PubAg, CaPlus / SciFinder, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Microbiology*) / CiteScore - Q2 (*General Immunology and Microbiology*)
