Biomarkers and Pathogenesis of Infectious and Autoimmune Diseases

Collection Editor:

Prof. Dr. Albert Rizvanov

Institute of Fundamental Medicine and Biology, Department of Genetics, Kazan Federal University, Kazan, Russia

Message from the Collection Editor

Infections and autoimmunity combined represent the group of diseases with highest challenge to the health system in the world. Emerging and re-emerging infections are registered globally putting the large populations at risk of getting seriously ill or death.

This collection is aimed to summarize the current knowledge on infectious and autoimmune diseases with the main emphasis to reveal biomarkers (old and novel) which could help to facilitate diagnosis, treatment and protection against infectious disease as well as autoimmune conditions.

We invite authors to contribute original manuscripts, case reports, clinical trials as well as reviews focused on infectious disease and autoimmunity.

Message from the Editor-in-Chief

The worldwide impact of infectious disease is incalculable. The consequences for human health in terms of morbidity and mortality are obvious and vast but, when infections of animals and plants are also taken into account, it is hard to imagine any other disease that has such a significant impact on our lives—on healthcare systems, on agriculture and on world economics. *Pathogens* is proud to continue to serve the international community by publishing high quality studies that further our understanding of infection and have meaningful consequences for disease intervention.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PubAg, CaPlus / SciFinder, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Microbiology*) / CiteScore - Q2 (*General Immunology and Microbiology*)
