University, Reims, France

Deadline for manuscript
submissions:

closed (30 September 2021)

Message from the Guest Editor

Klebsiella pneumoniae is a major pathogen that causes a wide range of infections, such as urinary tract infections and pneumonia, which may lead to severe sepsis and death. Moreover, the hypervirulent *K. pneumoniae* (hvKp) pathotype is responsible of life-threatening invasive diseases, such as liver abscesses.

For this Special Issue of *Pathogens*, we invite you to submit a review article/original research article related to infection and antimicrobial/antiseptic resistance of *K. pneumoniae*. We look forward to your contribution.

Message from the Editor-in-Chief

The worldwide impact of infectious disease is incalculable. The consequences for human health in terms of morbidity and mortality are obvious and vast but, when infections of animals and plants are also taken into account, it is hard to imagine any other disease that has such a significant impact on our lives—on healthcare systems, on agriculture and on world economics. *Pathogens* is proud to continue to serve the international community by publishing high quality studies that further our understanding of infection and have meaningful consequences for disease intervention.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PubAg, CaPlus / SciFinder, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Microbiology*) / CiteScore - Q2 (*General Immunology and Microbiology*)
