### Message from the Guest Editor

Dear Colleagues,

Long-Term Care Facilities (LTCF) are becoming an increasingly important component of healthcare delivery systems. However, many of the problems related to healthcare-associated infections (HAI) and colonization by multidrug-resistant (MDR) bacteria, already known in hospitals, begin to emerge and persist in LTCF.

To better understand the problem of the acquisition of HAI by MDR bacteria during internment at LCTF, this Special Issue aims to bring together research studies related to:

Epidemiological surveillance of HAI by MDR bacteria in patients interned at LTCF;

Risk factors for the acquisition of HAI during internment at LTCF;

Transmission routes of MDR bacteria within and between LTCF and other healthcare institutions or community;

Molecular epidemiology of MDR bacteria in LTCF;

Strategies to control the spread of MDR bacteria in LTCF.

This issue intends to enlarge the available literature regarding the worldwide occurrence of HAI by MDR bacteria in LTCF, the relevance of LTCF as reservoirs of clinically important MDR bacteria, and the advanced detection and/or next-generation treatment approaches of these infections.

## Message from the Editor-in-Chief

The worldwide impact of infectious disease is incalculable. The consequences for human health in terms of morbidity and mortality are obvious and vast but, when infections of animals and plants are also taken into account, it is hard to imagine any other disease that has such a significant impact on our lives—on healthcare systems, on agriculture and on world economics. *Pathogens* is proud to continue to serve the international community by publishing high quality studies that further our understanding of infection and have meaningful consequences for disease intervention.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PubAg, CaPlus / SciFinder, AGRIS, and other databases.

**Journal Rank:** JCR - Q2 (*Microbiology*) / CiteScore - Q2 (*General Immunology and Microbiology*)
