

Molecular and Cellular Aspects of Urinary Tract Infection

Guest Editor:

Dr. Kylie Mansfield

School of Medicine, University of
Wollongong, Wollongong, NSW
2522, Australia

Deadline for manuscript
submissions:

closed (15 July 2023)

Message from the Guest Editor

The focus of this Special Issue is on the properties of uropathogens that lead to recurrent infections, how interactions between the urinary microbiome and uropathogen prevent infection, and how uropathogens influence the immune and sensory functions of the urinary tract. A second focus is on how our understanding of these factors can be used to develop therapies that prevent recurrent infections. This Special Issue will aim to provide a comprehensive review of the molecular and cellular aspects that contribute to recurrent urinary tract infections and of the potential therapeutic approaches available to prevent recurrent urinary tract infections.

Message from the Editor-in-Chief

The worldwide impact of infectious disease is incalculable. The consequences for human health in terms of morbidity and mortality are obvious and vast but, when infections of animals and plants are also taken into account, it is hard to imagine any other disease that has such a significant impact on our lives—on healthcare systems, on agriculture and on world economics. *Pathogens* is proud to continue to serve the international community by publishing high quality studies that further our understanding of infection and have meaningful consequences for disease intervention.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PubAg, CaPlus / SciFinder, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Microbiology*) / CiteScore - Q2 (*General Immunology and Microbiology*)
