USA

Deadline for manuscript
submissions:

closed (30 September 2023)

Message from the Guest Editors

Dear Colleagues,

This Special Issue focuses on the management of infectious emergent diseases of trees caused by a wide range of pathogens, including viruses, phytoplasmas, bacteria, fungi, fungal-like organisms (e.g., oomycetes), parasitic plants, and nematodes. We encourage the submission of studies regarding science-based tree disease management approaches such as pathogen avoidance/exclusion or eradication, and pathogen control approaches employing host resistance, silvicultural strategies, and biological/chemical protection or therapies. Papers assessing the efficacy of biological control agents or chemical compounds only in vitro will generally not be considered, unless they bring new ideas or develop new analytical methods. Papers reporting disease control or the enhancement of health status of trees in association with the plant microbiome are particularly sought. Likewise, the identification of host resistance using modern approaches is of particular interest. Finally, conceptual and theoretical papers dealing with integrated disease management approaches are also welcome, as long as they are realistic and cost-effective.

Message from the Editor-in-Chief

The worldwide impact of infectious disease is incalculable. The consequences for human health in terms of morbidity and mortality are obvious and vast but, when infections of animals and plants are also taken into account, it is hard to imagine any other disease that has such a significant impact on our lives—on healthcare systems, on agriculture and on world economics. *Pathogens* is proud to continue to serve the international community by publishing high quality studies that further our understanding of infection and have meaningful consequences for disease intervention.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PubAg, CaPlus / SciFinder, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Microbiology*) / CiteScore - Q2 (*General Immunology and Microbiology*)
