Global Neonatal Screening: Expanding Horizons in Diagnostic Technologies

Message from the Guest Editor

This Special issue focuses on neonatal screening global to explore its current status and determine future developments. New developments in screening technology, such as primary genomic testing, have a great deal of potential, but they must not undermine public confidence or current endeavors to develop acceptable and effective screening programmes. Suggested themes include, but are not limited to, exploring the feasibility of an expert advisory group to provide informed and unbiased advice and support health policymakers at a national level; enablers for effective health policy development to inform political representatives, while recognizing and respecting national autonomy; a review of evidence to identify new conditions for assessment; opportunities for consumer input on expanding NBS screenings in Australia; and how we can ensure that the NBS screening is fit for purpose, timely, and robust. In this Special Issue, original research articles and reviews are welcome. I look forward to receiving your contributions.

About the Journal

Message from the Editor-in-Chief

Pediatric Reports is a publishing platform for all topics concerning pediatrics, from basic research to bedside care. We aim at targeting a composite audience, from experienced pediatricians to young residents and fellows. Contributions coming from different geographic areas may witness what happens in the pediatric field. Clinical observation of unusual cases will find its tribune, as well as trial reports and results of research related to diseases, which may represent frequent or rare events faced by Pediatricians. Rapid turnaround time will offer the opportunity to make immediately available, on a fully openaccess basis, the results described in the paper, to the entire community. We look forward to continuing the work done in the past years by *Pediatric Reports*, but also to making the journal grow according to changing expectations and attitudes of both clinicians and researchers who work for a more effective pediatric care.

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, ESCI (Web of Science), PubMed, PMC, Embase, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 31.7 days after submission; acceptance to publication is undertaken in 4.9 days (median values for papers published in this journal in the second half of 2025).
