Message from the Guest Editors

Dear Colleagues,

Extracellular vesicles (EVs) are lipid bilayer particles that function as carriers of intercellular communication under both physiological and pathological conditions. Not surprisingly, EVs have gained popularity as efficient vehicles, delivering therapeutic cargoes for cancer therapy. Nevertheless, efforts toward the standardization of methods of purification and production, drug loading and encapsulation, and surface functionalization for improved circulation kinetics and enhanced target specificity have yet to achieve the therapeutic potential of EVs for clinical use. Currently, EV microencapsulation with nanoporous biomaterials represents a great challenge in the field of controlled drug delivery. While the overwhelming majority of EV-based therapies in clinical trials consist of naïve EVs, contemporary progress in EV engineering is contributing to the development of more sophisticated drug delivery systems.

Message from the Editor-in-Chief

Pharmaceutics (ISSN 1999-4923) is an online open access journal on the science and technology of pharmaceutics and biopharmaceutics. The scientific community, the wider community and the general public have unlimited and free access to the content as soon as a paper is published; this open access to your research ensures your findings are shared with the widest possible audience. Please consider publishing your impressive work in this high quality journal. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Pharmacology and Pharmacy) / CiteScore - Q1 (Pharmaceutical Science)
