Message from the Guest Editors

Dear Colleagues,

Curcumin is used in various biomedical applications. Curcumin has antioxidant, antimicrobial, anti-inflammatory, and neuroprotective effects on human and animal health; it has several limitations, including poor water solubility and an unstable chemical structure, rapid metabolism but poor absorption in the body, as well as differing utilization and bioavailability depending on the species and sex of the organism. In this regard, curcumin in the form of a nanoparticle has been widely reported to enhance the bioavailability and solubility of lipophilic curcumin. In recent years, several studies have shown the beneficial effects of nanocurcumin over native curcumin in terms of quantity and efficacy. It is also important to know how effectively nanocurcumin can work in biological systems based on pharmacokinetic and pharmacodynamic tools. For this, different types of carrier vehicles, such as lipid nanoparticles and polymeric nanoparticles, can be used to increase the bioavailability of curcumin.

Message from the Editor-in-Chief

Pharmaceutics (ISSN 1999-4923) is an online open access journal on the science and technology of pharmaceutics and biopharmaceutics. The scientific community, the wider community and the general public have unlimited and free access to the content as soon as a paper is published; this open access to your research ensures your findings are shared with the widest possible audience. Please consider publishing your impressive work in this high quality journal. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Pharmacology and Pharmacy) / CiteScore - Q1 (Pharmaceutical Science)
