Liposomes are lipid nanovesicles extensively used as carriers for molecules in the fields of cosmetics and pharmaceuticals. Due to their biocompatibility, biodegradability, low toxicity, and high versatility, liposomes are increasingly being used in clinical applications. On the other hand, new liposome-like vesicles have been studied to overcome the disadvantages of liposomes, called “-omes” (e.g., transfersomes, niosomes, ethosomes, invasomes, and phytosomes). While traditionally employed for parenteral and transdermal routes, liposomes and the other lipid nanovesicular carriers are now being investigated as drug delivery systems for other administration routes, such as nose-to-brain.

This Special Issue aims to explore the state of the art, and showcase progress in this field. Both research articles and reviews are welcome. Research areas may include (but are not limited to) the following:

- New lipid nanovesicles;
- Novel techniques;
- Drug release, delivery studies;
- Targeted systems;
- New applications;
- New administration routes;
- Nose-to-brain delivery.

I look forward to receiving your contributions.

Message from the Editor-in-Chief

Pharmaceutics (ISSN 1999-4923) is an online open access journal on the science and technology of pharmaceutics and biopharmaceutics. The scientific community, the wider community and the general public have unlimited and free access to the content as soon as a paper is published; this open access to your research ensures your findings are shared with the widest possible audience. Please consider publishing your impressive work in this high quality journal. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Pharmacology and Pharmacy) / CiteScore - Q1 (Pharmaceutical Science)
