### Message from the Guest Editors

Dear Colleagues,

The concept of combining multiple therapies, i.e., “Combination Therapy”, has arisen as a viable solution to overcome the major challenges in pharmacological treatments, as are dose-associated toxicity, multidrug resistance, nonspecific delivery, stability, pharmacokinetics, and cost of new drug discoveries. This treatment paradigm is not new and combines existing therapies to achieve a synergistic therapeutic effect by targeting different cellular pathways associated with a disease at safe therapeutic doses. However, with the assistance of nanotechnology, old combination therapy has taken a more successful path in recent years. Using nanotechnology, drug delivery systems for combination therapy can be designed not only to control multidrug release but to selectively target the diseased tissues, as well as to respond to an external or internal stimulus for detection, diagnosis or treatment. This issue captures recent advances in drug delivery systems for combination therapy, encompassing fundamental understanding, development and applications.

## Message from the Editor-in-Chief

*Pharmaceutics* (ISSN 1999-4923) is an online open access journal on the science and technology of pharmaceutics and biopharmaceutics. The scientific community, the wider community and the general public have unlimited and free access to the content as soon as a paper is published; this open access to your research ensures your findings are shared with the widest possible audience. Please consider publishing your impressive work in this high quality journal. We would be pleased to welcome you as one of our authors.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q1 (Pharmacology and Pharmacy) / CiteScore - Q1 (Pharmaceutical Science)
